Sudoku: a smarter brain break

Present the updated Little Logic Club Sudoku game, highlighting a welcoming puzzle experience with hints, undo, and mistake tracking.

The logic stays simple

Grid Objectives

Fill each row, column, and 3×3 sub-box with the numbers 1–9 exactly once. No repeats allowed.

Choose Your Challenge

Pick from Easy, Normal, or Difficult levels to instantly generate a valid Sudoku board with a unique solution.

A smooth way to play

01

Select & Focus

Click a cell or use arrow keys. The active cell and related neighbors highlight instantly.

02

Input Digits

Press `1` - `9` or use the keypad. `Backspace` clears any mistake.

03

Smart Support

Click **Hint** to fill an empty cell or **Undo** to step back through your moves.

04

Final Check

Use **Check answers** at any time to validate your progress across the grid.

Helpful guardrails, not autopilot

3 Hints Per Puzzle

Strategic support when you're stuck. Hints fill one cell with the correct solution instantly.

Infinite Undo Move

Made a typo? Step back through your move history without penalty to correct your path.

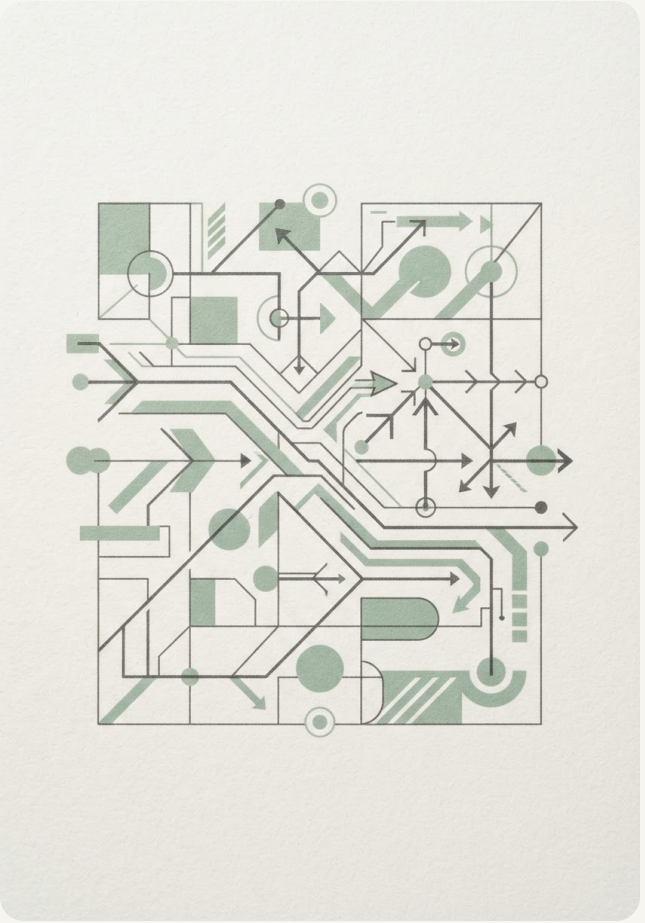

5 Mistake Limit

Real-time mistake tracking. Reaching 5 mistakes ends the game and reveals the full solution.

Behind the scenes: fair puzzles

- **Shuffled Symmetry**: Bands and columns are shuffled at the start to ensure every board feels fresh.
- **Recursive Solver**: A dedicated solution counter ensures every puzzle has exactly one valid path.
- **Dynamic Clue Targets**: Clues are systematically removed to reach difficulty targets: 40 (Easy), 34 (Normal), or 28 (Difficult).

```
countSolutions(board, limit = 2) { ... }
createPuzzle(difficulty) { ... }
```

Progress that persists

Easy Puzzle	100 pts
Normal Puzzle	200 pts
Difficult Puzzle	300 pts

All stats (games, scores, best time) are stored locally in your browser’s LocalStorage.
